Ingram Micro Services
Network Penetration Assessment

A Penetration Test Assessment can be used to address and evaluate the effectiveness of an existing security network in multiple environments, including both on-premises or cloud-based IP's. Technical Architects from Ingram Micro Services use a mix of manual and automated testing techniques in an attempt to gain access to information without the knowledge or permission of its owner.

The assessment can be used to evaluate the internal and external security perimeter and to provide recommendations for strengthening the security infrastructure to reduce the possibility of an external hacker compromising their information unknowingly. Penetration Tests can also be used to help organizations meet requirements for PCI, SOX, HIPAA, and 23 NYCRR 500 (Cybersecurity Requirements for Financial Services Companies published by New York State) for utmost security compliance.

Deliverables:

Ingram Micro will provide assessment services to identify system vulnerabilities and attempt to exploit them. A Penetration Test Assessment engagement will include:

- Initial consultation with partner and customer
- Review of the systems to test
- Final Presentation and review of findings and recommendations
- Final report documenting findings and recommendations

Process

1. Footprint environment to gather data.
2. Execute scans against the identified systems to identify vulnerabilities using a mix of manual and automated tools.
3. Attempt to exploit vulnerabilities using a mix of automated and manual tools.
    1.1 Produce a report that will document the results and recommendations.
4. Deliver the assessment report and its findings

Network Penetration Test Assessment Pricing		
SKU	**Description**	**MSRP**
JR8182	Internal Penetration Test 1st IP*	**$2,494.00**
JR8181	External Penetration Test 1st IP	**$2,975.00**
JR8183	each additional IP External or Internal	**$619.00**
