Ingram Micro Services
Network Vulnerability Assessment

A Vulnerability Assessment can be used to address and evaluate the effectiveness of an existing security network in multiple environments, including both on premise or cloud-based IP's. Architects from Ingram Micro Services use a mix of manual and automated testing techniques in an attempt to find vulnerabilities on a network that owners are unaware.

The assessment can be used to evaluate the external security perimeter and to provide recommendations for strengthening the security infrastructure to reduce the possibility of an external hacker compromising their information unknowingly.

Deliverables:

Ingram Micro will provide assessment services to identify system vulnerabilities. A Vulnerability Assessment engagement include:

- Initial consultation with partner and customer
- Review of the systems to test
- Execution of Vulnerability Assessment
- Final Presentation and review of findings and recommendations
- Final report documenting findings and recommendations

Process

1. Execute scans against the identified systems to identify vulnerabilities using a mix of manual and automated tools.
2. Produce a report that will document the results and recommendations.
3. Perform briefing to discuss findings.
4. Deliver report.

Network Vulnerability Assessment Pricing		
SKU	**Description**	**MSRP**
JR8177	External or Internal Vulnerability scan Up to Twenty (20) IP Addresses	$1,928.00
JR8178	External or Internal Vulnerability scan Up to Fifty (50) IP Addresses	$2,892.00
JR8180	External or Internal Vulnerability scan Up to Seventy-Five (75) IP Addresses	$3,695.00
JR8179	External or Internal Vulnerability scan Up to One Hundred (100) IP Addresses	$4,500.00

Internal tests require the installation of a scanning device on the customer network as part of the assessment
