NETWORK VULNERABILITY ASSESSMENTS

Help your customers find the flaws before attackers do.

Ingram Micro Services' **Network Vulnerability Assessments** helps you uncover where your customers' security gaps really are—whether their systems are on-premises, in the cloud or both. Our Security Architects combine automated tools with hands-on testing to identify hidden weaknesses across your customers' networks (often the ones they don't even know exist).

The goal? To help you deliver informed, data-backed recommendations and strengthen your customers' overall security posture—while also positioning you as their trusted cybersecurity advisor.

What we assess

We help you evaluate your customers' external security perimeter to identify risks and offer actionable recommendations to strengthen their infrastructure. The result is a clear view of their vulnerabilities and a roadmap to reduce the chance of compromise.

What you'll get

Our team delivers:

- An initial consultation to explore your customer's environment and assess scope
- A comprehensive vulnerability scan using both manual and automated methods
- A detailed report outlining findings, risks and prioritized recommendations
- A final presentation to review results and discuss next steps with you and your customer

How it works

- 1) We perform vulnerability scans on your customers' identified systems using automated and manual tools.
- 2) We document the results, outline key risks and provide tailored recommendations.
- 3) Our team walks you through the findings, answers questions and helps plan next steps.
- 4) You receive a full summary of vulnerabilities and remediations to guide your customer conversations and support future security upgrades.

Got questions? We've got answers.

Network Vulnerability Assessments

SKU	Description	MSRP
JR8177	External OR Internal Vulnerability Scan Up to 20 IP Addresses	\$1,928.00
JR8178	External OR Internal Vulnerability Scan Up to 50 IP Addresses	\$2,892.00
JR8180	External OR Internal Vulnerability Scan Up to 75 IP Addresses	\$3,695.00
JR8179	External OR Internal Vulnerability Scan Up to 100 IP Addresses	\$4,500.00

Internal tests require the installation of a scanning device on the customer network as part of the assessment. Any items not explicitly listed within this document are considered outside the scope of this service.

Why it all matters

Even the smallest, unnoticed weaknesses can create big problems for your customers. A Vulnerability Assessment gives you the visibility you need to help them act before attackers do.

With Ingram Micro, you get:

- Certified security experts with real-world experience across all types of customer environments
- Clear, unbiased findings based on industry best practices
- Easy-to-follow recommendations to help your customers reduce risk and strengthen defenses
- Ongoing support that grows with your business—from assessments to remediation and managed services

Protecting your customers starts with knowing their risks. Ingram Micro gives you the insight and support to see it all—so you can help keep them secure.
