The Value of IBM Cloud Cyber Recovery

Powered by Veeam ®

Improving Cybersecurity Resiliency while maintaining better outcomes for Backup, Disaster Recovery and hybrid cloud adoption are now more important than ever.

Protecting against a threat, with a strategic Backup plan and Disaster Recovery, is truly your last line of defense.

79%
of organizations having a data protection gap*

85%
of organizations witnessing at least one ransomware attack last year*

1.Known Validated Data Recovery for any Data

Protect critical data, your company depends on, from cyber threats

- Recover VMs directly

  from the protected backups within minutes

- Recover known good Data with flexibility and portability

- Seamless from Private and Public clouds

2.Start-to-Finish Immutability (Block to Object or Block to Tape)

Start-to-Finish Immutability (Block to Object or Block to Tape)

- Double and Triple Play Your

  Immutability with IBM Cloud Cyber Recovery

- Linux Block Immutable and S3 Compatible Immutable Backups

- Linux Block Immutability with WORM tape out

3.Tested and Verifiable Backups and Replicas

Securely detect backup and

replica
issues with Veeam Data Platform

- Provides isolated environments for testing and
  Recover VMs directly compliance, for VM and data recovery

- Recover VMs directly from backups within minutes

- Get proactive alerts and reports with Veeam ONE™

4. Secure Restore

Ensure secure and clean recoveries by staging machines and utilizing antivirus/antimalware scan engines prior to production recovery

• Restore to integrated isolated
   environment for testing

• Restore to any location, cloud,
   or on-premises

• Virtual network air-gap secures data
   from production

5. Comprehensive Backup, DR and Cyber Recovery Orchestration

Orchestrate backup and replica recovery with Veeam Recovery Orchestrator

• Protects multi-cloud, on-prem workloads,
   and data with cloud-native appliances

• Utilizes traditional replication
   and CDP (Continuous Data Protection)

• Provides automated recoveries
   with automated testing, reporting,
   and alert notifications along with
   dynamic documentation

Keeping your data safe is as easy as 3,2,1:

-3 copies, 2 different media, 1 is offsite

The result

A modern comprehensive approach that mitigates cyber-risks:

• Data protection that isolates

   business-critical data away
   from attack surfaces

• Immutable Object Storage

• Complete data protection
   plus validated recovery
