- Design Engineering Services
- ConnectedCare System Monitoring
- Training Academy

* Available on select models.

** Available for purchase at an additional cost.

136" All-in-One Display

For reliability and flexibility, the LG 136" all-in-one screen includes an embedded controller, easy-to-reach HDMI ports, and built-in speakers. These displays can be installed either on a wall or on an optional portable stand with motorized height adjustment, and then all you need to do is turn on the screen with the remote control like a home TV.

Transparent Color LED Film

The LG Transparent Color LED Film, which connects each pixel with a thin metal mesh, allows a clear view of the objects behind the product. This maintains a wide-open view while blending smoothly into the existing interior design. Once turned on, the product delivers a stunning, attention-grabbing display across the entire surface where the film has been applied.
